

## CASE STUDY: **Guy's Hospital**

### **A TEMPORARY RAMP TO THE HOSPITAL**

**REQUIREMENT:** The disabled entrance was provisionally out of use while major building work was being carried out.

A temporary solution was therefore needed from the carpark.

**END RESULT:** A Rental Ramp was installed within a few days.

Once the works were completed, the ramp was removed, and the car park was returned to its former state.

#### **FEATURES INCLUDED:**

- Mesh Platform - self-draining mesh allows water to pass through rather than collect on the surface.
- Trombone Ends - these are added to the ends of a Rapid Ramp to prevent clothes catching.
- Telescopic Legs - these can be adjusted to accommodate different threshold heights.
- Standard Continuous Handrail - this handrail system ensures users always have support to hold onto.

#### **EXTRA FEATURES INCLUDED:**

- Infill Handrail - this product prevents users from climbing or falling through gaps.
- Yellow Tread - this is a safety feature designed to help those with impaired vision identify the nose of the ramp or step. Additionally, it helps users distinguish any level changes.

**Application:** Healthcare

**Location:** London

**System:** Standard Ramp System

**Service Package:** Ramp Rental

**RAMP RENTAL:** This package is ideal for a variety of requirements, including:

- Buildings works
- Temporary modular buildings & marquees
- Overcoming access challenges

The minimum hire period applies, and the rental duration is flexible (more details available on application).

**Everything went well with the install and we have had no complaints from our client, so we will without doubt contact Rapid Ramp again in the future.**
