

CASE STUDY: Lord Derby Academy

CALCULATING ACCESS TO THE MATHS HUB

REQUIREMENT: A ramp with access steps to a newly built modular classroom.

ADDITIONAL INFORMATION: CAD drawings were designed by our specialist designer in-house, from measurements and photos taken by our site surveyor.

Our drawings are designed to allow customers to visualise how a ramp would appear in situ.

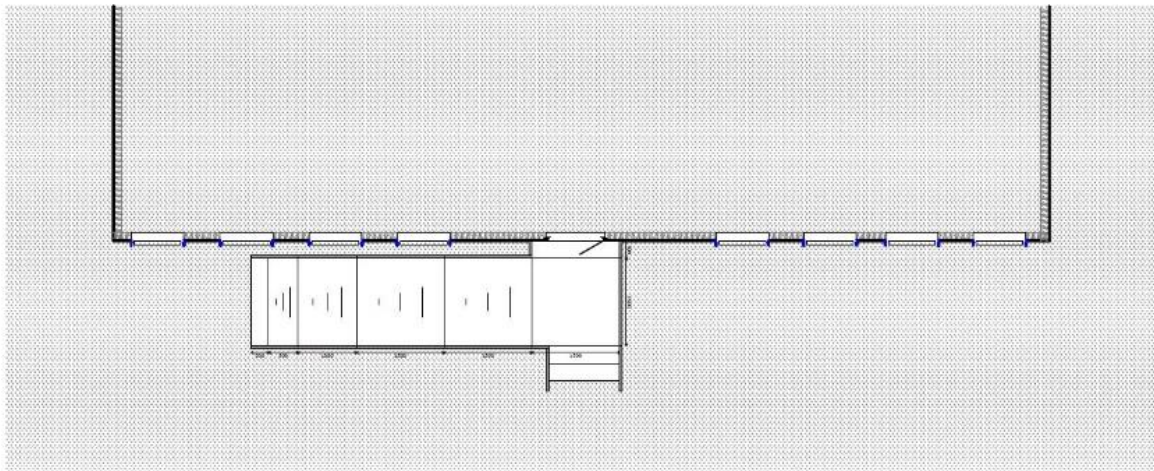

Application: Education

Location: Huyton, Merseyside

System: Standard Ramp & Steps

Service Package: Supply & Install

END RESULT: Our team installed the Rapid Ramp within the summer holiday.

FEATURES INCLUDED:

- Trombone Ends - these are added to the ends of a Rapid Ramp to prevent clothes catching.
- Telescopic Legs - these can be adjusted to accommodate different threshold heights.
- Mesh Platform - self-draining mesh allows water to pass through rather than collect on the surface.

EXTRAS INCLUDED:

- Infill Handrails - this handrail system prevents users from climbing or falling through gaps.
- Yellow Tread - a safety feature designed to help those with impaired vision identify the nose of the ramp or step. Additionally, it helps users distinguish any level changes.
- Step Unit - an ideal addition to any ramp installation, providing the access needed for able-bodied users. They can also be stand-alone units, independent of the Rapid Ramp System.

SCHOOL INSTALLATIONS

Installations are flexible and planned around the specific needs of each school.

Our installers often work within the holidays to accommodate around the teaching timetable.

Alternatively, installations during term time hours are just as achievable and our team are fully DBS checked (formerly CRB), which covers working with children and vulnerable adults.

I inspected the ramp yesterday afternoon and we are all very happy, so many thanks for your hard work.
